Cybersecurity Analyst with 3+ years of experience defending enterprise and healthcare environments across SOC operations, incident response, threat hunting, vulnerability management, and penetration testing. Proven ability to investigate and contain complex threats, automate vulnerability remediation, and reduce security risk by up to 45%. Hands-on expertise across Microsoft Sentinel, Defender, Splunk, CrowdStrike, Tenable, AWS/Azure, and ServiceNow

EXPERIENCE

Cyber Security Analyst | Hoag Memorial Hospital Presbyterian

Sept 2025 - April 2026 | Costa Mesa, California

- Led advanced security alert triage and investigation across endpoints, networks, and cloud workloads using Microsoft Sentinel (SIEM), Defender, and Proofpoint, collaborating with SOC engineers and managers to provide awareness and threat containment.
- Executed end-to-end incident response activities including detection, containment, eradication, and recovery for 20+ security incidents, coordinating ServiceNow escalations and remediation to resolve 90%+ within SLAs while minimizing business disruption.
- Conducted proactive threat hunting, malware analysis, and vulnerability assessments, identifying 50+ IOCs, misconfigurations, and exploitable weaknesses using Defender, Tenable, and Wiz, supporting risk-based patch prioritization and risk reduction efforts.
- Built an automated vulnerability management workflow using Azure Logic Apps, integrating CVE intelligence, remediation ticketing, and SLA tracking to reduce manual effort by 60% and improve patch compliance visibility.

Security Analyst | Intello Group, Inc.

June 24 – Sept 2025 | Orange, California

- Monitored and triaged 60+ weekly alerts across Splunk SIEM and CrowdStrike EDR, investigating malware, phishing, privilege escalation, and lateral movement incidents; supported containment, eradication, and recovery for 50+ confirmed incidents.
- Analyzed multi-layered security alerts (firewalls, IDS/IPS, EDR, WAF, proxies) to accurately differentiate false positives from genuine threats and ensure prompt escalation and containment.
- Worked closely with IT, compliance, and business units on security risk reduction program to classify critical assets, build risk registers, and implement ISO 27001 / NIST compliant controls – cutting high-risk vulnerabilities by 30% in six months and lowering overall risk exposure through cost-benefit driven control selection.
- Documented over 100 security incidents with comprehensive notes on findings, response actions, and outcomes to enhance team knowledge sharing and incident response protocols.

IT Assistant | California State University, Dominguez Hills

Jan 22 - May 23 | Carson, California

- Managed the internal ServiceNow ticketing system to address hardware and software issues impacting system security and access control, contributing to overall compliance with security policies for on-premises environments.
- Provided specialized support to over 100+ students and staff for configuring and troubleshooting DUO multi-factor authentication (MFA), reinforcing IAM best practices and enhancing campus-wide information security.

Penetration Tester | Citoto Digital Personality Pvt Ltd

July 20 - April 21 | Pune, India

- Conducted web and mobile application penetration testing, identifying OWASP Top 10 vulnerabilities including SQLi, XSS, CSRF, session fixation, path traversal, and information leakage.
- Performed network and application security testing using Burp Suite, Nikto, SQLMap, Wireshark, Metasploit, and other automated tools and led threat modeling using DFDs and STRIDE to identify insecure data flows and trust boundaries, reducing post-deployment vulnerabilities by 30%.
- Developed and delivered security awareness training for 40+ staff, resulting in a 45% reduction in phishing incidents within 3 months.

PROJECTS

Real-Time Threat Monitoring with Splunk and Active Directory

- Built a home lab simulating a Windows AD environment with Splunk and Sysmon, generating over 8,000+ log events/day to practice log collection, alert creation, and real-time threat detection.
- Simulated brute-force attacks on AD accounts using Crowbar and Atomic Red Team, then created custom Splunk alerts and dashboards to detect failed logins, account lockouts, and suspicious authentication patterns.

Real-Time Threat Monitoring with ELK on AWS

- Designed and deployed an AWS-based log analysis pipeline using Nginx and the ELK Stack (Elasticsearch, Logstash, Kibana) to improve threat detection, security monitoring, and incident response.
- Created real-time Kibana dashboards that enabled 30% faster identification of system issues and accelerated security investigations across over 10,000 log events daily.

Securing CI/CD Pipelines with DevSecOps Automation

- Designed and implemented a secure CI/CD pipeline using Jenkins, integrating SonarQube, OWASP Dependency Check, and Trivy to automate code and container security checks.
- Reduced critical vulnerabilities in sample deployments by 40% through early detection and remediation, simulating secure deployments to Tomcat in a controlled academic environment.

SKILLS

- **Cloud and development:** AWS, Java, Python, SQL, Jenkins, PowerShell Scripting
- **Security Tools and analysis:** Defender, Sentinel, Splunk, ELK Stack, Proofpoint, Wireshark, Burp Suite, SIEM
- **Security Frameworks & Compliance:** MITRE ATT&CK, Cyber Kill Chain, NIST, PCI-DSS, and HIPAA standards.
- **Certifications:** CISSP (ongoing), CompTIA Security+, Introduction to Cyber Security (Coursera - NYU Tandon), IT Fundamentals for Cybersecurity (Coursera - IBM), Fortinet certified fundamentals

EDUCATION

Master of Science in Cybersecurity (4/4) | California State University, Dominguez Hills

Carson, California | May 23

Bachelor of Engineering in Computer Science (3.4/ 4) | University of Pune

Pune, India | May 19
